

London July 31<sup>th</sup> 1833

Dear Sir The Spleen is  
an Elastic Reservoir of  
Venous Blood  
The Venous Blood is  
required for the Secretion  
of Bile - the Elastic Power  
of the Spleen constantly  
acts to send the Blood  
to the Liver -

I am yours truly  
J. C. Cooper

+ I do not know if the quantity  
sent is uniformly the same

The Splenic Artery divides  
as the Pulmonary artery does  
is tributary upon cells in  
the Spleen which communicate  
with the Veins
